1. Introduction

Folder Asset Tool is a powerful Unity Editor extension designed to enhance your workflow by providing visual customization options for assets in the Project window and GameObjects in the Hierarchy window.

Key Features

- **18 Material Design Colors:** Apply beautiful, predefined colors to your assets
- **48 Text Emojis + 30+ Unity Icons:** Add visual badges to identify assets quickly
- **Favorites System:** Mark important assets with golden borders for instant recognition
- **Dual Support:** Works with both Project Window assets AND Hierarchy GameObjects
- **Granular Control:** Global and per-asset visibility toggles
- **Persistent Settings:** All customizations are saved automatically

Who Is This For?

- Developers managing large Unity projects
 - Teams needing consistent asset organization
 - Anyone who wants to improve their editor workflow
 - Projects requiring quick visual asset identification
-

2. Installation

Step 1: Import the Package

1. Open Unity (version 2021.3 or higher recommended)
2. Open your project
3. Go to **Assets > Import Package > Custom Package**
4. Select the **FolderAssetTool.unitypackage** file
5. Click **Import** in the import dialog

Step 2: Verify Installation

After importing, verify the following files exist:

```
Assets/  
  Scripts/  
    Editor/  
      FolderColorizer.cs  
      AssetToolsWindow.cs  
      FavoritesWindow.cs  
      FolderColorSettings.cs  
      FOLDER_ASSET_TOOL_GUIDE.txt  
    Editor/  
      FolderColorSettings.asset (created automatically)
```

Step 3: First Launch

1. Right-click any folder in the Project window
2. Select **Folder Asset Tool**
3. The main window will open
4. Settings file will be created automatically at `Assets/Editor/FolderColorSettings.asset`

Installation Complete

You are now ready to start customizing your Unity editor!

3. Quick Start Guide

Your First Customization (2 Minutes)

Step 1: Open the Tool

- Right-click any folder in your Project window
- Select **Folder Asset Tool**

Step 2: Apply a Color

- In the **Colors** tab, click any color square
- The folder icon will instantly change color

Step 3: Add an Icon

- Click the **Icons** tab
- Select an emoji (like 🍌 or 🐼)
- The emoji appears as a badge on your folder

Step 4: Add to Favorites

- Click the **Favorites** tab
- Click **Add to Favorites**
- Your folder now has a golden border

Congratulations! You've just customized your first asset.

4. Features Overview

4.1 Color Customization

Apply one of 18 Material Design colors to any asset or GameObject.

Available Colors:

- Red, Pink, Purple, Deep Purple
- Indigo, Blue, Cyan, Teal
- Green, Light Green, Yellow, Amber
- Orange, Deep Orange, Brown
- Dark Gray, Gray, White

Color Effects:

- **Icon Tinting:** Changes the color of the asset icon
- **Text Highlighting:** Adds a semi-transparent colored background to the asset name (list view only)

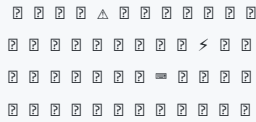

How to Apply:

1. Select an asset or GameObject
2. Open **Tools > Folder Asset Tool**
3. Click a color in the **Colors** tab
4. Click  **Remove Color** to clear

4.2 Icon System

Add visual badges to your assets using two icon types:

Text Emojis (48 Available)

Unity Icons (30+ Available)

- Script Icon, Prefab Icon, Scene Icon
- Material Icon, Shader Icon, Texture Icon
- Animation Icon, Animator Controller Icon
- Audio Clip Icon, Video Clip Icon
- Camera Icon, Light Icon, Particle System Icon
- And more...

How to Apply:

1. Select an asset or GameObject
2. Go to **Icons** tab
3. Click any emoji or Unity icon
4. Click  **Remove Icon** to clear

4.3 Favorites Management

Mark important assets for quick access with a distinctive golden border.

Features:

- Golden outline effect on icons
- Dedicated **Favorites Window** for browsing
- Search and filter capabilities
- Works with both assets and GameObjects

How to Use:

1. Select an asset or GameObject
2. Go to **Favorites** tab
3. Click  **Add to Favorites**
4. Access all favorites via **Tools > Asset Favorites**

4.4 Options & Settings

Control visibility with global and per-asset toggles.

Global Options

- **Show Colors:** Toggle all color tinting
- **Show Highlights:** Toggle all text highlighting
- **Show Emojis:** Toggle all icon badges

Per-Asset Options

- **Show Color for this asset:** Toggle color for selected asset only
- **Show Highlight for this asset:** Toggle highlight for selected asset only
- **Show Emoji for this asset:** Toggle emoji for selected asset only

Note: Global options must be enabled for per-asset options to work.

5. User Interface Guide

5.1 Main Window

Access via:

- Right-click context menu:  **Folder Asset Tool**
- Top menu: **Tools > Folder Asset Tool**

Window Components

Header Section:

- Shows selected asset name
- Displays asset type (Project Asset or Scene GameObject)

Tab Navigation:

-  Colors
-  Icons
-  Favorites
-  Options

Colors Tab:

- 6x3 grid of color swatches
- Currently applied color is highlighted
- Remove Color button (when color is applied)

Icons Tab:

- Text Emojis section: 8 columns of emojis
- Unity Icons section: 8 columns of Unity built-in icons
- Remove Icon button (when icon is applied)

Favorites Tab:

- Status display (favorited or not)
- Add/Remove from Favorites button
- Open Favorites Window button

Options Tab:

- Global Options section (affects all assets)
- Current Asset Options section (affects selected asset only)

5.2 Favorites Window

Access via: **Tools > Asset Favorites**

Features:

- Displays all favorited assets
- Search bar for filtering
- Click to select and ping asset
- Remove button (X) for each favorite
- Auto-updates when favorites change

6. Step-by-Step Tutorials

6.1 Organizing Your Project

Goal: Create a color-coded, icon-labeled project structure

Step 1: Color Your Main Folders

1. Right-click your **Scripts** folder
2. Select  **Folder Asset Tool**
3. In the **Colors** tab, click **Blue**
4. In the **Icons** tab, select the  emoji
5. Repeat for other folders:
 - **Prefabs** → Green + 
 - **Materials** → Purple + 
 - **Audio** → Yellow + 
 - **Scenes** → Red + 

Step 2: Mark Important Assets

1. Find your main GameManager script
2. Right-click and select  **Folder Asset Tool**
3. Go to **Favorites** tab
4. Click  **Add to Favorites**
5. Apply a color (e.g., Orange)
6. Add an icon (e.g., )

Step 3: Organize Subfolder

1. Inside Scripts, create subfolders:
 - **Managers** → Dark Gray + 📁
 - **UI** → Light Green + 📁
 - **Player** → Blue + 📁
 - **Enemies** → Red + 📁

Result

You now have a visually organized project with instant visual recognition!

6.2 Managing Favorites

Goal: Create a quick-access collection of important assets

Step 1: Add Multiple Favorites

1. Select your Player prefab → 📁 **Folder Asset Tool** → **Favorites** → 📁 **Add to Favorites**
2. Select your MainScene → Add to Favorites
3. Select your GameManager script → Add to Favorites
4. Select your UIController → Add to Favorites

Step 2: Browse Favorites

1. Open **Tools > Asset Favorites**
2. The Favorites Window displays all favorited items

Step 3: Use Search

1. In the Favorites Window, type "Player" in the search bar
2. Only matching favorites are displayed

Step 4: Quick Navigation

1. Click on any favorite in the list
2. Unity automatically selects and pings that asset

Step 5: Remove Favorites

1. Click the ✕ button next to a favorite
2. Or select the asset → 📁 **Folder Asset Tool** → **Favorites** → **Remove from Favorites**

6.3 Customizing Scene GameObjects

Goal: Organize your Hierarchy with colors and icons

Step 1: Customize Player GameObject

1. In the Hierarchy, right-click your **Player** GameObject
2. Select 📁 **Folder Asset Tool**
3. Apply **Green** color
4. Add 📁 icon

Step 2: Organize Game Systems

1. Right-click **GameManager** → Apply **Orange** + 📁 icon
2. Right-click **UIManager** → Apply **Yellow** + 📁 icon
3. Right-click **AudioManager** → Apply **Purple** + 📁 icon

Step 3: Mark Camera and Lighting

1. Right-click **Main Camera** → Apply **Blue** + **Add to Favorites**
2. Right-click **Directional Light** → Apply **Yellow**

Result

Your Hierarchy is now color-coded and easy to navigate!

7. Script Reference

7.1 FolderColorSettings

Type: ScriptableObject **Location:** Assets/Scripts/Editor/FolderColorSettings.cs **Purpose:** Stores all customization data and provides API methods

Public Properties

```
public List<FolderColorData> folderColors
```

List of all customized assets/GameObjects

```
public bool globalShowColors
```

Global toggle for color display

```
public bool globalShowHighlight
```

Global toggle for highlight display

```
public bool globalShowEmojis
```

Global toggle for emoji/icon display

Public Methods

GetFolderColor

```
public Color GetFolderColor(string path)
```

Description: Returns the color assigned to the specified path **Parameters:**

- `path` (string): Asset path or "hierarchy:GameObjectName" **Returns:** Color assigned to the path, or Color.clear if none

SetFolderColor

```
public void SetFolderColor(string path, Color color)
```

Description: Assigns a color to the specified path **Parameters:**

- `path` (string): Asset path or "hierarchy:GameObjectName"
- `color` (Color): Color to assign

RemoveFolderColor

```
public void RemoveFolderColor(string path)
```

Description: Removes all customizations for the specified path **Parameters:**

- `path` (string): Asset path or "hierarchy:GameObjectName"

HasColor

```
public bool HasColor(string path)
```

Description: Checks if the path has a color assigned **Parameters:**

- `path` (string): Asset path or "hierarchy:GameObjectName" **Returns:** True if color is assigned, false otherwise

GetEmoji

```
public string GetEmoji(string path)
```

Description: Returns the emoji/icon assigned to the specified path **Parameters:**

- `path` (string): Asset path or "hierarchy:GameObjectName" **Returns:** Emoji string, or empty string if none

SetEmoji

```
public void SetEmoji(string path, string emoji)
```

Description: Assigns an emoji/icon to the specified path **Parameters:**

- `path` (string): Asset path or "hierarchy:GameObjectName"
- `emoji` (string): Emoji text or Unity icon name

HasEmoji

```
public bool HasEmoji(string path)
```

Description: Checks if the path has an emoji assigned **Parameters:**

- `path` (string): Asset path or "hierarchy:GameObjectName" **Returns:** True if emoji is assigned, false otherwise

IsFavorite

```
public bool IsFavorite(string path)
```

Description: Checks if the path is marked as favorite **Parameters:**

- `path` (string): Asset path or "hierarchy:GameObjectName" **Returns:** True if favorited, false otherwise

SetFavorite

```
public void SetFavorite(string path, bool isFavorite)
```

Description: Marks or unmarks the path as favorite **Parameters:**

- `path` (string): Asset path or "hierarchy:GameObjectName"
- `isFavorite` (bool): True to favorite, false to unfavorite

GetFolderData

```
public FolderColorData GetFolderData(string path)
```

Description: Returns the complete data object for the specified path **Parameters:**

- `path` (string): Asset path or "hierarchy:GameObjectName" **Returns:** FolderColorData object, or null if none exists

SetFolderOption

```
public void SetFolderOption(string path, string optionName, bool value)
```

Description: Sets a per-asset visibility option **Parameters:**

- `path` (string): Asset path or "hierarchy:GameObjectName"
- `optionName` (string): "showColor", "showHighlight", or "showEmoji"
- `value` (bool): True to show, false to hide

7.2 FolderColorData

Type: Serializable Class **Location:** Assets/Scripts/Editor/FolderColorSettings.cs **Purpose:** Data structure for individual asset customizations

Public Fields

```
public string folderPath
```

Asset path or "hierarchy:GameObjectName"

```
public Color color
```

Assigned color (Color.clear if none)

```
public string emoji
```

Assigned emoji/icon name

```
public bool isFavorite
```

Favorite status

```
public bool showColor
```

Per-asset color visibility toggle

```
public bool showHighlight
```

Per-asset highlight visibility toggle

```
public bool showEmoji
```

Per-asset emoji visibility toggle

7.3 FolderColorizer

Type: Static Class (InitializeOnLoad) **Location:** Assets/Scripts/Editor/FolderColorizer.cs **Purpose:** Core rendering system and menu items

Note: This class is initialized automatically and handles all visual rendering. No manual coding required.

Menu Items

```
Tools/Folder Colorizer/Open Settings
Tools/Folder Colorizer/Clear All Colors
Tools/Folder Asset Tool
Tools/Asset Favorites
Assets/[icon] Folder Asset Tool (context menu)
GameObject/[icon] Folder Asset Tool (context menu)
```

7.4 AssetToolsWindow

Type: EditorWindow **Location:** Assets/Scripts/Editor/AssetToolsWindow.cs **Purpose:** Main UI panel for customization

Public Methods

ShowWindow

```
public static void ShowWindow(string assetPath)
```

Description: Opens the Asset Tools Window for the specified path **Parameters:**

- `assetPath` (string): Asset path or "hierarchy:GameObjectName"

Example Usage:

```
using UnityEditor;

// Open window for selected asset
string path = AssetDatabase.GetAssetPath(Selection.activeObject);
AssetToolsWindow.ShowWindow(path);

// Open window for a GameObject
AssetToolsWindow.ShowWindow("hierarchy:Player");
```

7.5 FavoritesWindow

Type: EditorWindow **Location:** Assets/Scripts/Editor/FavoritesWindow.cs **Purpose:** Browse and manage favorites

Public Methods

ShowWindow

```
public static void ShowWindow()
```

Description: Opens the Favorites Window

Example Usage:

```
// Open favorites window programmatically
FavoritesWindow.ShowWindow();
```

8. Advanced Usage

Programmatic Customization

You can programmatically apply customizations using the API:

```
using UnityEditor;
using UnityEngine;

public class CustomizationScript
{
    [MenuItem("Custom/Apply Blue Color to Scripts")]
    static void ColorizeScripts()
    {
        FolderColorSettings settings = AssetDatabase.LoadAssetAtPath<FolderColorSettings>(
            "Assets/Editor/FolderColorSettings.asset");

        if (settings != null)
        {
            // Apply blue color to Scripts folder
            Color blue = new Color(0.13f, 0.59f, 0.95f, 0.6f);
            settings.SetFolderColor("Assets/Scripts", blue);

            // Add emoji
            settings.SetEmoji("Assets/Scripts", "📜");

            // Mark as favorite
            settings.SetFavorite("Assets/Scripts", true);

            // Save changes
            EditorUtility.SetDirty(settings);
            AssetDatabase.SaveAssets();
            EditorApplication.RepaintProjectWindow();
        }
    }
}
```

Batch Operations

Apply customizations to multiple assets at once:

```

using UnityEditor;
using UnityEngine;

public class BatchCustomization
{
    [MenuItem("Custom/Colorize All Prefabs")]
    static void ColorizePrefabs()
    {
        FolderColorSettings settings = AssetDatabase.LoadAssetAtPath<FolderColorSettings>(
            "Assets/Editor/FolderColorSettings.asset");

        if (settings == null) return;

        // Find all prefab files
        string[] guides = AssetDatabase.FindAssets("t:Prefab");
        Color green = new Color(0.30f, 0.69f, 0.31f, 0.6f);

        foreach (string guid in guides)
        {
            string path = AssetDatabase.GUIDToAssetPath(guid);
            settings.SetFolderColor(path, green);
            settings.SetEmoji(path, "🌿");
        }

        EditorUtility.SetDirty(settings);
        AssetDatabase.SaveAssets();
        EditorApplication.RepaintProjectWindow();

        Debug.Log($"Colorized {guids.Length} prefabs!");
    }
}

```

Custom Color Palette

Create your own color presets:

```

// Create a custom color
Color customPurple = new Color(0.5f, 0.2f, 0.8f, 0.6f);
settings.SetFolderColor("Assets/MyFolder", customPurple);

```

9. Troubleshooting

Colors Not Displaying

Problem: Applied colors don't show up on assets

Solutions:

1. Check global toggle: **Options > Show Colors** must be enabled
2. Check per-asset toggle: **Options > Show Color for this asset** must be enabled
3. Try repainting: Right-click asset → **Refresh** or press F5
4. Restart Unity Editor if issue persists

Emojis Not Displaying

Problem: Emojis/icons don't appear on assets

Solutions:

1. Check global toggle: **Options > Show Emojis** must be enabled
2. Check per-asset toggle: **Options > Show Emoji for this asset** must be enabled
3. For Unity icons: Ensure icon name is correct
4. Text emojis may not display on all systems (font support required)

Highlights Not Displaying

Problem: Text highlighting not visible

Solutions:

1. Check global toggle: **Options > Show Highlights** must be enabled
2. Check per-asset toggle: **Options > Show Highlight for this asset** must be enabled
3. Highlights only work in **List View** mode (not grid/icon view)
4. Switch Project window to list view: Two-column layout

Settings File Missing

Problem: "Settings not found" error message

Solutions:

1. Right-click any asset → **Folder Asset Tool** (creates settings automatically)
2. Or manually: **Tools > Folder Colorizer > Open Settings**
3. If still missing, create manually: Right-click in Project → **Create > Editor > Folder Color Settings**
4. Ensure file is at: `Assets/Editor/FolderColorSettings.asset`

Customizations Lost After Restart

Problem: All customizations disappear after closing Unity

Solutions:

1. Ensure settings file exists: `Assets/Editor/FolderColorSettings.asset`
2. Check version control: Settings file must be tracked (not in `.gitignore`)
3. Verify file is saved: After changes, check file has been modified
4. Check Unity console for save errors

Golden Border Not Showing

Problem: Favorites don't display golden outline

Solutions:

1. Verify favorite status: Open **Favorites** tab, should say "This asset is in your favorites!"
2. Check if color is overriding: Golden border should appear with or without color
3. Try removing and re-adding to favorites
4. Repaint windows: Right-click asset → **Refresh**

Window Won't Open

Problem: "Folder Asset Tool" menu doesn't open window

Solutions:

1. Try menu alternative: **Tools > Folder Asset Tool**
2. Check Unity console for script errors
3. Verify all scripts are present in `Assets/Scripts/Editor/`
4. Reimport package if scripts are missing

10. FAQ

General Questions

Q: Does this work with Unity's built-in assets? A: Yes! You can colorize Packages, built-in resources, and even Unity's internal folders.

Q: Does this affect my game build? A: No. All scripts are Editor-only and don't affect runtime or build size.

Q: Can other team members see my customizations? A: Yes, if you share the `Assets/Editor/FolderColorSettings.asset` file via version control.

Q: What Unity versions are supported? A: Unity 2021.3 or higher recommended. May work on older versions (not tested).

Q: Can I customize the color palette? A: The UI uses predefined colors, but you can set custom colors programmatically (see Advanced Usage).

Features

Q: How many assets can I customize? A: Unlimited. The system is optimized for performance.

Q: Can I combine color + emoji + favorite? A: Yes! All features can be used together on the same asset.

Q: Do highlights work in grid view? A: No, text highlights only work in list view (two-column layout).

Q: Can I customize individual files, not just folders? A: Yes! Any asset or GameObject can be customized.

Technical

Q: Where is the data stored? A: In the ScriptableObject at `Assets/Editor/FolderColorSettings.asset`

Q: Can I access the API from runtime scripts? A: No, all classes are in the `UnityEditor` namespace (Editor-only).

Q: Does this work with nested prefabs? A: Yes, any asset type is supported.

Q: Can I export/import settings? A: Yes, just copy the `FolderColorSettings.asset` file between projects.

11. Version History

Version 1.0 (Current)

Release Date: 2026

Features:

- 18 Material Design colors
- 48 text emojis
- 30+ Unity icons
- Favorites system with golden borders
- Global and per-asset visibility toggles
- Project Window support
- Hierarchy Window support
- Favorites browser window
- Persistent settings
- Complete API for programmatic access

Known Issues:

- Text emojis may not display on all operating systems (font-dependent)
 - Highlights only work in list view mode
-
